

Plugin A Name

This [wiki plugin](#), available since Tiki1, creates an anchor in a wiki page that can be linked to. Use in conjunction with the [PluginAlink](#), which creates the link to the anchor.

Starting with Tiki release 2.0, Tiki will automatically create anchor points for all headings in a wiki page. You can use the [PluginAlink](#) to link to any heading on a wiki page *without* having to use a corresponding ANAME plugin.

Parameters

Create an anchor that can be linked to

Introduced in Tiki 1.

[Go to the source code](#)

Preferences required: wikiplugin_aname

Parameters
<i>(body of plugin)</i> - The name of the anchor.
<i>no parameters</i>

Usage

To take use this plugin in a wiki page, use the syntax:

```
{ANAME()}anchorname{ANAME}
```

In the generated XHTML for your webpage, Tiki will create the following anchor:

```
<a id='anchorname'></a>
```

Notes:

- If you include spaces in the anchor name, Tiki will convert the spaces to underscores (_).
For example, {ANAME()}my custom anchor{ANAME} will render as: .
- Starting with Tiki release 2, Tiki generates the anchor using the id attribute. In prior releases, Tiki used the HTML name attribute ().

Example

Aname Plugin Usage

```
{ANAME( )}
```

anchorname <--put the name of the anchor here. Use this same name for the aname= parameter in the Plugin Alink (see just below).

```
{ANAME}
```

ANAME example: {ANAME()}anchorname{ANAME}

Alink Plugin Usage

```
{ALINK(
```
