

模块

在Tiki中, a **module** is simply a box of content (which may or may not have "chrome" such as borders and title backgrounds). All side-column information of this site is presented through modules. The Modules Admin page is used to add modules to and manage modules in the module zones of a Tiki site.

Here's a screenshot:

Some common uses for modules are to:

- Display menus
- Add special features
- Display custom information to users
- List most recent or most frequent actions or items

After adding modules, you can re-order them, assign permissions to them (so they appear only for specific user groups), or even allow them to be customized by specific users.

Note

尽管它们被称为“模块”，但几乎所有内容都包含在默认的Tiki安装中。没有额外的“附件”需要安装才能使用这些模块。

配置和显示模块

For site-wide module settings, click the **General** icon  on the Admin Panels or Access **<http://example.org/tiki-admin.php?page=general>**.

These settings will apply to all modules on the site and are explained in more detail at Module Admin.

有两种方法可以配置和显示单个模块：

1. Using the Admin Modules Panel

- Located at **Admin->Modules** or **tiki_admin_modules.php**
- Allows you to:
 - Set module parameters
 - Create custom modules
 - Place modules in the left or right column and, since Tiki7, other areas like the page header and footer
- Documentation at Module Admin

2. Using PluginModule

- Allows you to:
 - Display a module in a page or within other features (like blogs, articles, etc.) besides the left or right columns

- Also place module content inside of a user module
- Set module parameters
- See Index of Modules

Modules vs. Plugins

The distinction between **modules** and **wiki plugin** is a little blurry. Technically speaking, modules are the *containers* and plugins are the *content*. However, the predefined modules included with the default Tiki installation contain plugins/content, but they are commonly called **modules**, too.
