

Backlinks

Backlinks are a very important feature in a wiki. They answer the question "*What pages link to this page?*". The backlinks icon and dropdown list is displayed at the top right of wiki pages.

If a page is renamed, Tiki automatically updates all of its backlinks.

Use the **tiki_p_view_backlink** permission to allow or restrict who can view a page's backlinks.

Activate Backlinks feature via Admin Wiki page.

Backlinks are a wiki feature that can be enabled on the **Features** tab of the Admin Wiki page.

1. From the Admin Features page, click the **wiki** icon
The Admin Wiki page (tiki-admin.php?page=wiki) appears.
2. From the Admin Wiki page, click the **Features** tab.
(image missing)
3. Click **Change Preferences**.

To set the necessary permission for this feature, click the Key icon.

NOTE: If you are having trouble with backlinks showing up, try clearing the cache, rebuilding the site index and checking the group permissions for this feature.

Activate Backlinks feature via Plugin

It can also be done with PluginBacklinks so you can put anywhere.
