

# My Account

The My Account feature (formerly *MyTiki*)

- Is where the user enters personal profile information
- Is where the user sets personal preferences for the website
- Shows the user's wiki page and article contributions, etc.

The User Features in Tiki enable the user to customize the site for their own purposes by selecting the visual theme, site language, behavior of notifications, and so on, from a range of options enabled by the administrator and appropriate for the site. Tiki has always been meant to be a community collaboration tool. In My Account, the user can configure preferences regarding sharing personal information (selectively) and interacting with other site users. The features that are available to registered users are grouped in the My Account section.

The screenshot shows the 'User Preferences' page with a navigation bar at the top containing 'My Account', 'Preferences', 'My Info', 'My Watches', and 'More'. Below this is a sub-navigation bar with 'Assign Group' and 'User Information'. The main content area is titled 'Personal Information' and contains several form fields: 'User' (a text field with a value), 'Real Name' (a text field), 'Profile picture' (a small profile picture icon and a link to 'Pick user profile picture'), 'Gender' (radio buttons for 'Male', 'Female', and 'Hidden'), 'Country' (a dropdown menu), 'Location' (a map with a location pin and a link to 'Search Location To My Location'), 'Homepage URL' (a text field), 'Your Personal Wiki Page' (a link to 'UserPage' with an 'Edit' link), 'Your personal tracker information' (a link to 'View extra information'), and 'User Information' (a dropdown menu set to 'Private'). A 'Save changes' button is at the bottom.
