

# Plugin TrackerToggle

*Introduced in Tiki7*

This wiki plugin utilizes jQuery to toggle the visibility of an HTML element (like a div) depending on the value of a field. This plugin can be used in Pretty trackers (but it is not meant to be used with pluginLIST ). This plugin permits Display logic.

# Parameters

Adjust the visibility of content based on a tracker field's value, possibly dynamically

*Introduced in Tiki 7. Required parameters are in **bold**.*

[Go to the source code](#)

*Preferences required: wikiplugin\_trackertoggle, feature\_trackers*

Parameters	Accepted Values	Description	Default	Since
<code>id</code>	text	HTML id of the element that is toggled		7.0
<code>value</code>	text	Value to compare against.		7.0
<code>fieldId</code>	digits	Numeric value representing the field ID tested.		7.0
<code>visible</code>	(blank) y n	Set whether visible when the field has the value.	n	7.0
<code>itemId</code>	digits	Use the field of specific item. The URL param itemId is used if this parameter is not set.	0	7.0

# Note

- Category needs categId not categName to match
- If you use a field more than once in a template (e.g., `{$f_180}` ) only the first one on the page will be functional
- Only one plugin TRACKER of the same trackerId may appear on the page
- Only fields with a text value or checkbox (y/n) are functional prior to Tiki11

# Examples

# Radio buttons

This code will show the div *success* only if the field 206 has the value "Show". When the field is not set yet, the div is not displayed.

```
{DIV(id="success")}{Congratulations! The "success" div now shows.}{DIV} {trackertoggle fieldId="206" value="Show" visible="y" id="success"} {$f_206}
```

Result:

**You do not have permission to insert an item**

# Show only if checkbox is checked

This code will show the div 'checkbox' only if the checkbox is checked. When the box is not checked, the div is not shown

```
{DIV(id="checkbox")}{The checkbox div}{DIV} {trackertoggle fieldId="180" value="y" visible="y" id="checkbox"}  
Checkbox: {$f_180}
```

# Show unless checkbox is checked

Will show the div until the checkbox is checked.

```
{DIV(id="checkbox")}The checkbox div{DIV} {trackertoggle fieldId="180" value="y" visible="n" id="checkbox"}  
Checkbox: {$f_180}
```
