

PluginXMPP

New in Tiki19 is a way to embed an XMPP chatroom in a wiki page, powered by ConverseJS. See also Module XMPP

```
{xmpp room="general" view_mode="embedded"}
```

A chatbox will appear in the middle of the page. This chatbox is a group chat, where many users can send messages.

You can create a room for each discussion topic.

Parameters

Chat using Xmpp

*Introduced in Tiki 19. Required parameters are in **bold**.*
