Indicate source for the code

Pick Github You should fork <https://github.com/lphuberdeau/tiki-azure> and use this.

Authenticate with Github

and pick repo

The screenshot shows a dialog box with a dark header bar containing an information icon and the text "The authorization was successful." Below the header, the main content area is titled "Choose a repository to deploy". It features two input fields: "REPOSITORY NAME" with a dropdown menu showing "tiki-azure" and "BRANCH TO DEPLOY" with a text input field containing "master". At the bottom left, there are three numbered steps: "1", "2", and "3", with "2" being the active step. At the bottom right, there are two circular buttons: a back arrow and a checkmark.

The authorization was successful.

Tiki side configuration

Set MySQL SSL connection

It is recommended to use an SSL connection when using cloud based databases. See [MySQL SSL](#) for details

Troubleshooting

Deployment failed

The screenshot shows the Windows Azure portal interface. At the top, the text "Windows Azure" is visible. The main content area is for a resource named "mytikitest" in a "PREVIEW" state. A navigation menu includes "DASHBOARD", "DEPLOYMENTS", "MONITOR", "CONFIGURE", "SCALE", and "LINKED RESOURCES". A prominent error message states: "DEPLOYMENT FAILED: Thursday, June 13, 2013 11:37 AM". Below this, it says "Fetch from https://github.com/marclaporte/tiki-azure" and provides details: "ID: temp-b9bcc", "AUTHOR: N/A", and "DEPLOYED BY: GitHub". A "GITHUB http" link is also present. At the bottom of the error message, it says "Not Modified: Thursday, June 13, 2013 11:46 AM". The bottom navigation bar contains icons for "NEW", "BROWSE", "SYNC", and "DISMISS".
