

Assigning Modules

Configuring modules and displaying them in the left and right columns is done through the page at **Admin->Modules** or **tiki-admin_modules.php**. Before [Tiki7](#), this could be done only through a form and modules could only be assigned to left and right columns.

With [Tiki7](#), modules can be assigned by dragging and dropping as well, and they can be assigned to other areas (like the header and footer areas). Both methods of assigning modules are described below. The settings for configuring the modules are explained on the next page, [Module Settings Interface](#).

1.1. Using the Form

Only available method prior to [Tiki7](#)

Here are the basic steps to configuring and displaying a module using the form:

- Go to the first tab on **Admin->Modules** (or **tiki-admin_modules.php**)
- Select a new module to assign or a previously assigned module to reconfigure:
 - *New:*
 - *Prior to [Tiki7](#):*
Select a module from the dropdown under the **Assign new module** heading
 - *With [Tiki7](#):*
Click on the *Add module* button, which will bring up an **Edit module** tab with a dropdown for selecting the module to assign
 - *Existing:* Click the edit icon () for the module you wish to reconfigure in the **Assigned Modules** section
- Set or change the settings to your satisfaction (see [Module Settings Interface](#))
- Click *Assign*

Mouse over this screenshot of the module admin page (version 6.x) illustrating these steps:

Modules Revamp
This tab remains for legacy purposes to allow editing "the old way"

Assigned Modules

Clicking this button will take you to the Edit module tab

Areas where modules can be placed with Tiki7

Add module

Top Topbar Pagetop Left Right Pagebottom Bottom No Tabs

Name	Order	Cache	Rows	Parameters	Groups	Action
logo	1	7200		nobox=y style=float:left;margin:0 30px;		
quickadmin	1	7200		nobox=y style=position: absolute; right: 200px;	Admins	

1.2. Dragging and Dropping

Available with [Tiki7](#)

- Go to the *All Modules* tab on **Admin->Modules** (or **tiki-admin_modules.php**)
- Drag the gray module icon () for the module you want to the area where you want to place it. A yellow highlighted "drop zone" will appear wherever the module can be placed. Mouse over the thumbnail to see a screenshot of dragging a module to the left column until a drop zone appears:

Module

Drag gray module icon until yellow background shows indicating it's an area where modules can be placed

Admin Modules

Clear Cache Admin Menus Save

Modules Revamp

Experimental. This feature is still under development

- Drag the modules around to re-order then click save
- Double click them to edit
- Modules with "position: absolute" in their style can't
- New modules can be dragged from the "All Module

Note: Links and buttons in modules, apart from the Application drop more reliable. Click here to return HOME
[More info here](#)

Assigned modules User Modules All Modules

Filter: ☐ Show all modules

Application Menu	Description not s
Contributors	Lists the contrib
File Galleries	Displays links to
Google AdSense	Displays a textfi
Google Search	Displays a simp
Groups Emulation	Enables tempor
Last Actions	experience the s
Last Visitors	Displays the spe
Last-modified File Galleries	Displays the spe

- When you release the module into the drop zone, a box will pop up where you can set the module settings. Mouse over this thumbnail to see an example:

- Set or change the settings to your satisfaction (see [Module Settings Interface](#))
- Click **Save**

1.3. Changing Module Position

In the **Assigned Modules** sections above, action icons allow you to change the position of modules as follows:

- — Move the module up
- — Move the module down
- — Move the module from the left column to the right column
- — Move the module from the right column to the left column

1.4. Where to Go From Here

Now that you have an idea of the mechanics of the two different ways of choosing the module to configure and assign, go to the net page, [Module Settings Interface](#), for an explanation of module settings.
