Edit Templates

Related: Edit CSS

Pre requisites:

The feature must be enabled through: Look and Feel -> Theme -> tick edit templates then apply. (once this is done you will see "Edit templates" in your Admin menu)

The user must have the tiki_p_edit_templates permission.

Feature:

 $Edit \ Template \ is \ a \ feature \ to \ let \ you \ edit \ the \ Smarty \ template \ files \ (.tpl) \ of \ your \ theme \ via \ the \ web \ interface.$

It is also possible to let users view templates without editing

Registered users can try here: https://themes.tiki.org/tiki-edit_templates.php

Troubleshooting

Error - When attempting to enable the Edit Templates feature you encounter a 404 page with the error *You don't have permission to access tiki-edit_templates.php on this server*

Possible Explanation - Some shared hosting companies have built-in security that prevents certain files from being executed. If you received an error similar to this when installing TikiWiki the same solution likely applies.

Solution - Contact your host and have them 'whitelist' or allow the file tiki-edit_css.php to be executed.
