

Facebook Tab

Option	Description	Default
Facebook site name	The default website name that will be used by Facebook (og:site_name) for every webpage. This parameter will be used instead of the browser title.	None
Facebook site image	The default image (logo, picture, etc.) that will be used by Facebook (og:image) for every webpage. It must be specified as a URL. The minimum valid image size is 200x200px. However, Facebook recommends 1200x630px or larger for the best display on high resolution devices.	None
Application ID	Application ID generated by registering this Tiki site as an application at Facebook	None
Application secret	Application secret generated by registering this Tiki site as an application at Facebook	None
Login using Facebook	Allow users to log in using Facebook	Disabled
Auto-create Tiki user	Automatically create a Tiki user by the username of fb_xxxxxxx for users logging in using Facebook if they do not yet have a Tiki account. If not, they will be asked to link or register a Tiki account	Disabled
Require Facebook users to enter local account info on creation	Require Facebook users to enter local account info, specifically email and local log-in name	Disabled
Set user email from Facebook on creation.	Tiki will set the user's email from Facebook on creation.	Disabled
Create a user tracker item on registration	Sets whether a tracker item should be created for the user upon registration	Disabled
First and last name tracker field IDs to set on creation	Comma-separated, with first name field followed by last name field; for example, '2,3'	Disabled
Tiki can post to the Facebook wall	Tiki may post status messages, notes, photos, and videos to the Facebook Wall.	Disabled
Tiki can manage events	Tiki may create and RSVP to Facebook events.	Disabled
Tiki can manage pages	Tiki can manage user pages.	Disabled
Tiki can SMS	Tiki can use SMS functions via Facebook.	Disabled

Since Tiki 16 Tiki integrate default parameters that are used by Facebook when fetching a page if they are missing or if you prefer to use your own for the entire Tiki.

Activate Facebook integration

Note: It is possible to have your post (forum, blog, article, etc) posted to Twitter using an external social media automation solution. Those external services are very popular and use Tiki RSS feed to fetch and publish content on your behalf.

Consumer Key and **Consumer Secret** are used for integrate your Tiki and Facebook using a Facebook application.

Setting up Facebook integration

First, you need to register a new application with Facebook. This can be done via the [Developers tool](#). Later on, you can edit the Application via [Application settings](#) in your Facebook profile.

Step 0

On the Developer page click on [Set Up New Application](#) and enter a name for your Application, sell your soul (agree to the terms) and click on **Create Application**. After a successful captcha check, you can proceed with step 1.

You may need to login in Facebook to accept the validation process in Facebook (to allow the developer application use your account details in Facebook, etc).

Step 1

The name of your application is already set, so you don't need to enter a new one. Feel free to upload a logo and icon for your app. As I give support via e-Mail, I entered my email address for the users support.

Change your icon

Appears next to your application name throughout Facebook (16x16)

Change your logo

Appears in authorization dialogs, search results, and the app directory (75x75)

The native language of your application.

The email address or URL where users can contact you about your application

The email address where Facebook can contact you or your company

The URL to your application's Privacy Policy, required for the permissions dialog.

The URL to your application's Terms of Service, used in the permissions dialog.

Developers can edit this application and may appear on the Application Profile

Developers added here will be sent a request and shown as "pending" until they accept the request.

Save Changes

Step 2

Enter the site URL and the Site Domain. My test server is at test.ott-consult.de and tiki is at the URL for my test server is at <http://test.ott-consult.de/trunk>. The Site URL therefore is **http://test.ott-consult.de/trunk/tiki-socialnetworks.php?request_facebook**.

Canvas

Canvas Page
Canvas URL
Secure Canvas URL

The base URL of your app on Facebook
Facebook pulls the content for your app's canvas pages from this base URL.
Facebook uses this secure version of the Canvas URL when your app is accessed by a user over a secure connection (HTTPS).
Choose whether your Canvas URL renders HTML in an iframe or returns FBML.
Choose "Auto-resize" if you are using FB.XCCanvasView or FB.XCCanvasView in your app and want the Canvas iframe to grow to the height of your app's content.
The URL to load when a user clicks your app's bookmark. If blank, this defaults to your Canvas Page.

Start Using Facebook Credits

Welcome to the Facebook Credits program. To get started:
1. Register your company below
2. Provide core settings below
3. Review API documentation and complete your integration

Company Information

Company Name
No company registered
Don't see your company listed? Register it now
Before accepting Facebook Credits, we need to collect company information to pay you for Credits users spend in your application.

Core Settings

Credits Callback URL
Email
Credits Test Users (optional)
Facebook pings this URL after a user initiates or updates an order.
This email is used for payments related communication.
Users entered here (UIDs, comma-delimited) will be able to use your app and go through Facebook Credits flows but will not be charged.

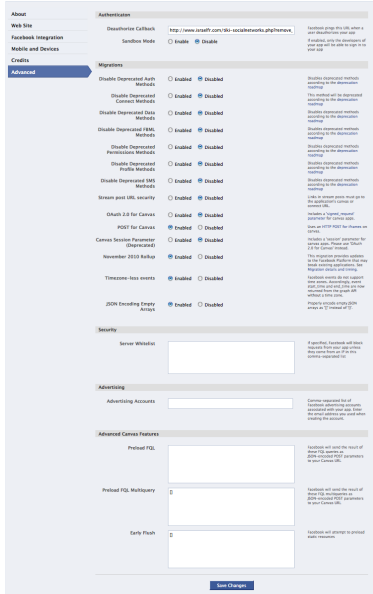

Save Changes

Step 6

On this last step, you can give the Facebook **Deauthorize Callback** which will be called, when a user disallows your application on Facebook. Don't choose sandbox mode here.

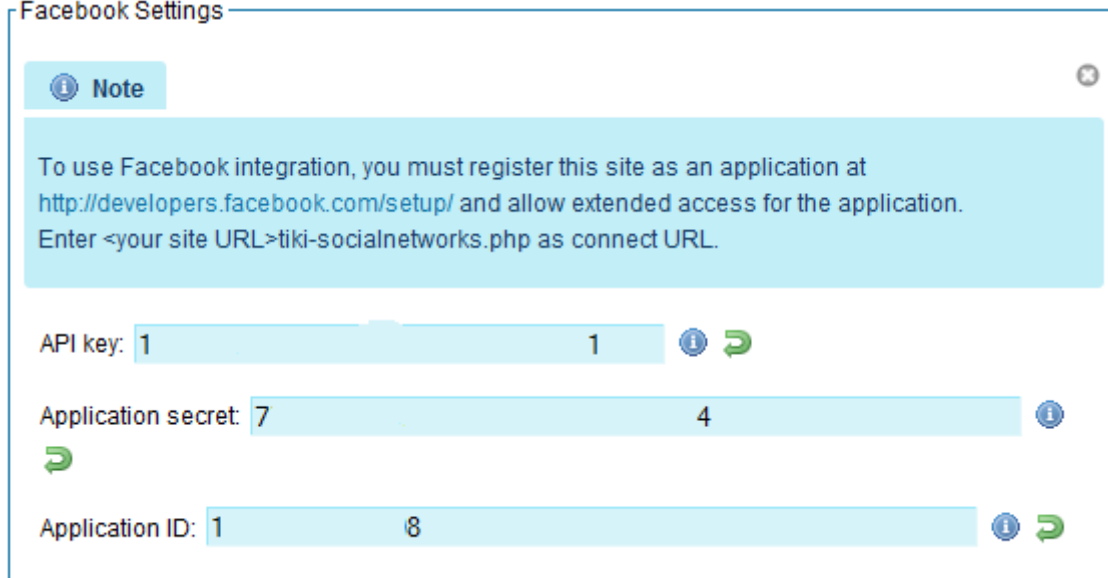

Usually, your web server has a static IP address. By putting it on the **server whitelist**, you can add a bit of security, as only requests from that IP will be processed. If you run a server farm with multiple servers, add all IP addresses.

You can also uncheck all the "deprecated" setting, it won't hurt.

Now you created the application at Facebook and you can enter the data on your tiki server. Go to Admin->Social networks and enter the data from Facebook.

Facebook Settings

User authorization

Users need the tiki_p_social_network [permission](#) in order to use social networks. To login via facebook, the Anonymous group will need this permission.

Before being able to use the Facebook integration, users must authorize the TikiWiki site by requesting an oauth token. This can be done via the **Social networks** tab on [My Tiki](#).

Note : As i (Bernard) authorize it i encounter an error from Facebook servers: "message": "Invalid redirect_uri: Given URL is not allowed by the Application configuration.". I had to logout/login for Facebook to accept the authorization. It is possible also that you have to wait more than 15mn for the Facebook server to use the setting you just entered.
