

# Feature Name

- 
- Use Heading 2 for the Feature Name. (Because we don't add the page titles automatically).
- Describe what the feature is for in 100-200 words. Give a couple of examples how the feature would be used.
- Include a half page size (about 300 pixels wide) cropped image of the feature in action.
- backlink to index related pages, related features, general concepts etc. Don't use a bulleted list here because it takes up too much vertical space.

## Using Multiple Pages to Document a Feature

If multiple pages are used to document a feature, list them here with a brief explanation. Use plain language to name additional pages.  
((Create a Feature))  
((Configure a Feature))  
((Add Permissions to a Feature))

# How to use Feature

-

**Enable the Feature:** (explain how to find this feature's admin panel with both breadcrumbs and a direct local url)  
Administration>Feature>Page **local url:**yoursite.com/url

# Explaining the "Create" Form

Create a table which explains the form that is used to create the instance of the feature.

| Option                      | Choices You have                  | Default Behavior                         | What this does in plain language                 |
|-----------------------------|-----------------------------------|--|--|
| Turn on Dinger?             | Yes,No                            | No                                       | Turns on a noisy dinger that dings when you ping |
| <b>exact text from form</b> | acceptable values,comma separated | what happens if you choose not to choose | what difference it makes                         |
| Dinger Name                 | alphanumeric                      | required field                           | You have to give the dinger a name.              |

## Modify/Customize the instance

(explain how to find this feature's admin panel with both breadcrumbs and a direct local url)

Administration>Feature>Page **local url**:yoursite.com/url

## Explaining the next form

Create a table which explains the form or options that customize the instance.

| Option                      | Choices You have                  | Default Behavior                         | What this does in plain language                 |
|-----------------------------|-----------------------------------|--|--|
| Turn on Dinger?             | Yes,No                            | No                                       | Turns on a noisy dinger that dings when you ping |
| <b>exact text from form</b> | acceptable values,comma separated | what happens if you choose not to choose | what difference it makes                         |
| Dinger Name                 | alphanumeric                      | required field                           | You have to give the dinger a name.              |

## Permissions

Explain what permissions can be applied to the feature and what they mean.

Try it out

---

please link to the live Feature on tikiwiki.org

## Developer Notes

---

-

Notes on the ongoing development of this feature, please indicate the latest released stable version, identified bugs, links to development pages, etc.

## Developers Contact

---

-

Developers who worked on or understand this feature should leave a contact link and indicate if they are available for paid or free help.

## Feature FAQ

---

-

Any Questions? Edit this page and someone will respond!
