

## Integrator Details

## Requirements

1. In `php.ini` `track_errors` should be `On` to be able to show integration error messages in a convenient way (-  
+`$php_errormsg`+ PHP variable used).

;`Store the last error/warning message in $php_errormsg (boolean). track_errors = On`

2. `tiki_p_view_integrator` (see general permissions) needed to view configured repositories
3. `tiki_p_admin_integrator` (see general permissions) needed to configure repositories and rules
