

Migrate to Tiki

There are two built-in data importers: from [WordPress](#) and [MediaWiki](#).

Note: this page contains many links that should be [imported](#). Please copy over the relevant information.

This page covers migration to Tiki from another CMS/Wiki.

In order to migrate between the same version on different platforms see [Migrate](#). In order to upgrade an existing installation of Tiki from one version to another see [Upgrade](#).

Some preliminary work exists if you're moving a CMS/Wiki to Tiki. First you must [install Tiki](#). After that you can use these tools which are not complete or built with perfection in mind, but can be most useful to someone willing to fix some problems and enhance some aspects.

[HTML::WikiConverter](#)

CMS/Wiki :

- [PHPNuke](#)
- [Phpwiki](#)
- [Postnuke](#)
- [Wikini](#) (Wakka based wikis)
- [phpBB](#) (a nice forum and groupware)
- [TWiki](#) - an Enterprise Collaboration [Platform](#)
- [MoinMoin](#)

We are looking for new data conversion scripts from other popular cms, blog, forum applications. Please contribute! You're also encouraged to contribute fixes or documentation on the existing scripts.

toggg: should I recall that, we, in PEAR, are trying to bring our 2 cts, Paul Jones ' [Text_Wiki](#) and [papercrane](#)'s prototype converter ? (as stated in WikiParser)

alias

- [Migrate to Tikiwiki](#)
