

6. $\frac{1}{2}x^2 - 3x + 5$
 1. $\frac{1}{2}x^2 - 3x + 5 = \frac{1}{2}(x^2 - 6x) + 5 = \frac{1}{2}(x^2 - 6x + 9 - 9) + 5 = \frac{1}{2}(x - 3)^2 - \frac{9}{2} + 5 = \frac{1}{2}(x - 3)^2 - \frac{1}{2}$
 2. $\frac{1}{2}x^2 - 3x + 5 = \frac{1}{2}(x^2 - 6x + 9) - \frac{9}{2} + 5 = \frac{1}{2}(x - 3)^2 - \frac{1}{2}$
