Tiki side configuration

Set MySQL SSL connection

It is recommended to use an SSL connection when using cloud based databases. See [MySQL SSL](#) for details

Troubleshooting

Deployment failed

The screenshot shows the Windows Azure portal interface. At the top, it says "Windows Azure" with a dropdown arrow. Below that is a navigation bar with "mytikitest" and a "PREVIEW" label. The main navigation menu includes "DASHBOARD", "DEPLOYMENTS", "MONITOR", "CONFIGURE", "SCALE", and "LINKED RESOURCES". The "DEPLOYMENTS" section is active, showing a deployment failure notification. The notification text reads: "DEPLOYMENT FAILED: Thursday, June 13, 2013 11:37 AM". Below this, it says "Fetch from https://github.com/mardaporte/tiki-azure" and "ID: temp-b9bcc AUTHOR: N/A DEPLOYED BY: GitHub". A "GITHUB http" link is also present. At the bottom of the notification, it says "Not Modified: Thursday, June 13, 2013 11:46 AM". The bottom of the screen features a dark bar with a "+ NEW" button and three icons labeled "BROWSE", "SYNC", and "DISMISS".
