

Wysiwyg Editor User

If the site administrator has selected the Wysiwyg editor as the default at ([Wysiwyg Editor Admin](#)), the edit page will look like this:

Edit: New page
Perhaps you are looking for:
HomePage

Use normal editor

Categorize show categories

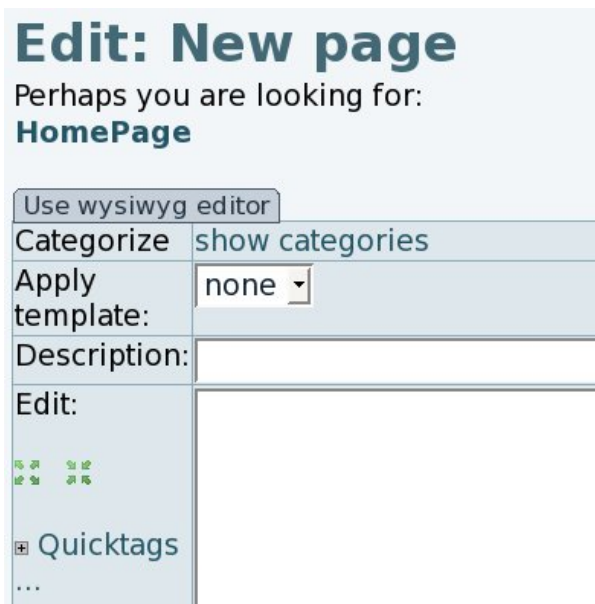

Apply template: none

Description:

Style Font Size Source

This screenshot shows the 'Edit: New page' interface with the 'Use normal editor' tab selected. The form includes fields for 'Categorize' (show categories), 'Apply template:' (none), and 'Description:'. Below these fields is a rich text editor toolbar with various icons for text formatting, alignment, and insertion. At the bottom of the toolbar are dropdown menus for 'Style', 'Font', and 'Size', along with a 'Source' button.

If not enabled by default, the edit page would show a tab saying "**Use wysiwyg editor**", which would shift the editor from the classical (below) to the visual one (see previous image).

HomePage

Use wysiwyg editor

Categorize show categories

Apply template: none

Description:

Edit:

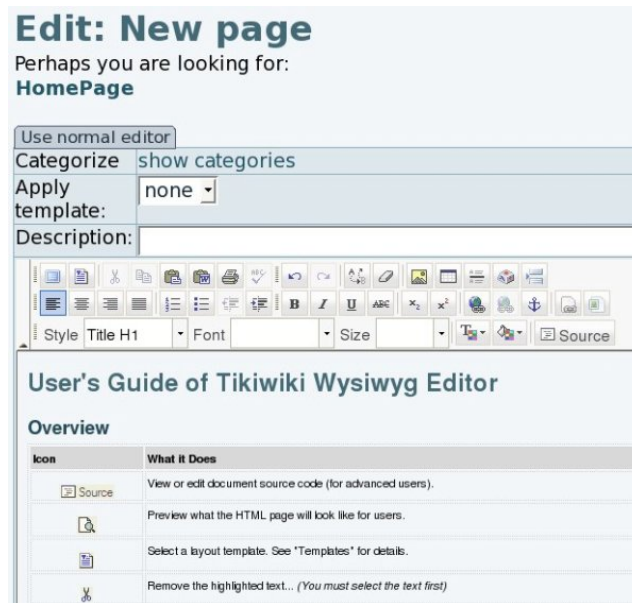

Quicktags

...

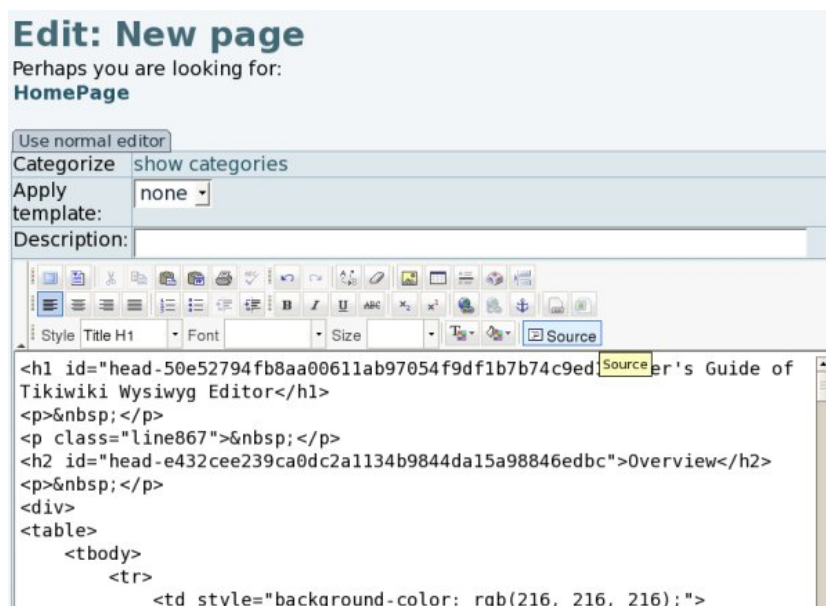

This screenshot shows the 'Edit: New page' interface with the 'Use wysiwyg editor' tab selected. The form includes fields for 'Categorize' (show categories), 'Apply template:' (none), and 'Description:'. Below these fields is an 'Edit:' section with a visual editor and a 'Quicktags' section with a plus icon and three dots.

Shifting from visual editor to viewing html source code

Once using the wysiwyg editor, you can shift from the visual editor to the html source code, for instance, using the corresponding "source" button.

And after pressing at the "source button", the other content (html code) would be shown:

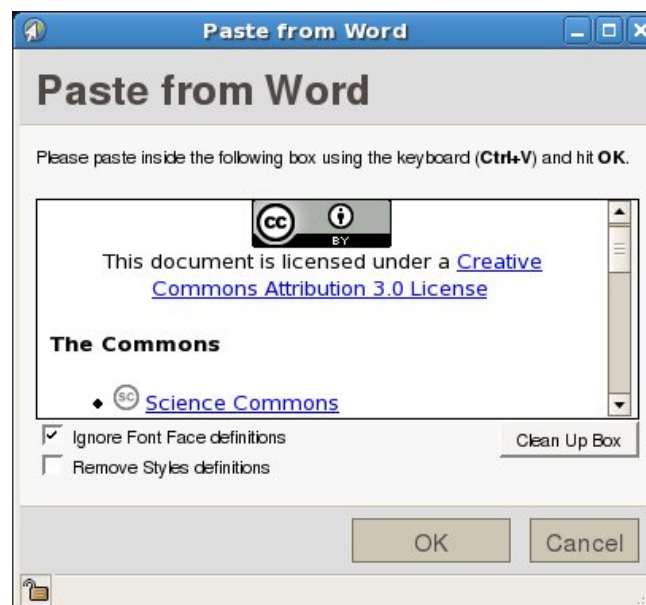

Tiki6: source shown only if the permission is granted

The wiki page edit toolbar in Wysiwyg mode since Tiki6 is now checking if the user has the permission to use HTML (tiki_p_use_HTML), in order to show the "source" button. Similarly, the permission tiki_p_wiki_view_source will be required to allow converting that html into wiki syntax.

Pasting from word processor documents

There is a special feature (and button) to paste content from a word processor program (), which opens a pop up box with a visual text area. Use this to paste the content from your favourite editing program (such as OpenOffice.org Writer, KWord, ... or whatever other closed source alternatives):

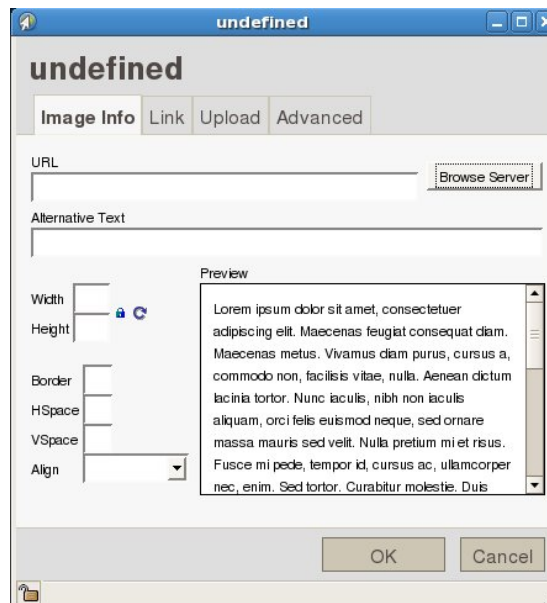

Inserting or editing internal Wiki links

Pressing on the button "Inserting or editing internal Wiki links" (), will open pop up window that will allow you to create links to current wiki pages in the Tiki site.

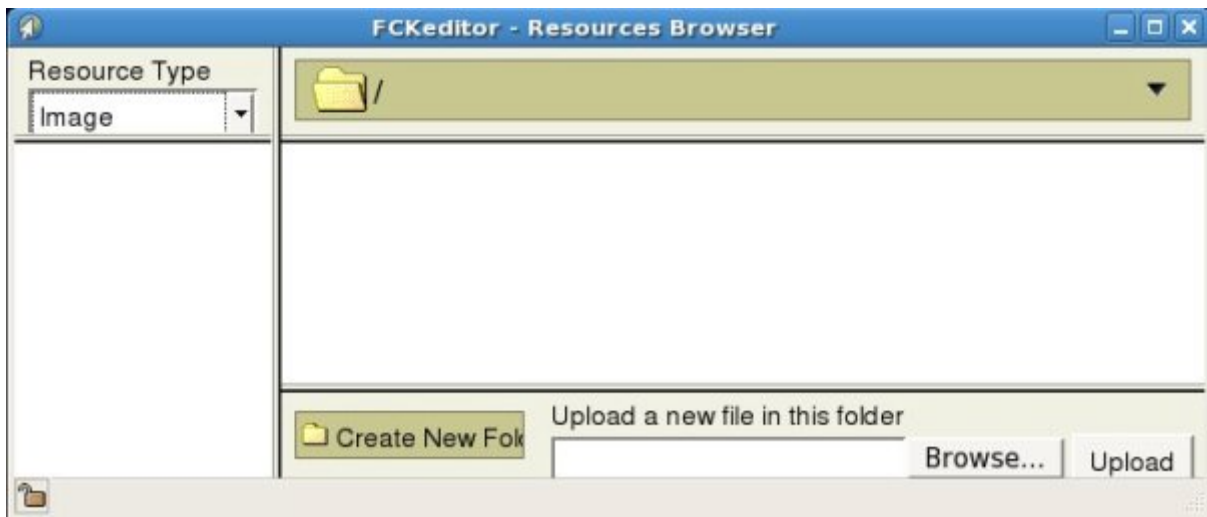

Inserting Tiki images

Pressing on the button "Tiki image" (), will open a pop up window that will allow you to insert images into the page.

If you click in the "**Browse server**" button, you'll be able to select images from the tiki site to be inserted in that wiki page.
